

#### What You Should Do When Dispatch Gives a Time Benchmark

##### Radio Traffic Transmission:

"Command from Dispatch, you are 10 minutes into your incident"

- As an officer or firefighter, what do you do when you hear that type of transmission? (Any time increment applies) This is not a report you give to anyone unless something is wrong, it's a responsibility of the company to keep each other safe.

If you are working inside a structure with your company and a time announcement is made:

It's time to think about the P-A-L report:

**P** – People in your company  
*Are they okay: think company accountability*

**A** – Air supply in your tank  
*How much is remaining; can you get out on that amount if something goes wrong?*

**L** – Location in the building  
*Where are you, what is your closest exit?*

# P-A-L
